

Dealing with cold weather

Cold weather tips to help your unit start in cold weather when needed:

- Be sure your fuel is No. 1 and/or treated with antigel
- Antigel poured into a gelled tank will not ungel the fuel; the unit must be ran with antigel to circulate
- There are several products on the market to pour into gelled fuel
- Most of the time the fuel doesn't look gelled, but the fuel is thick enough it plugs the in-line fuel filter or main fuel filter
- Check block heater cords for cracks or broken wires
- Plug block heaters in and check to make sure the block warms up around the heater
